DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Kamei et al (5,609,947).

Kamei et al disclose a laminated non-woven fabric comprised of a thermoplastic resin used making the fibers that are used in the non-woven fabric. These thermoplastic resins may include polyesters such as polyethylene terephthalate, polybutylene terephthalate, polyamides such as nylon 6, nylon 66, nylon 46 and others as set forth in the patent. See col. 2, lines 45-50. The method of making the non-woven fabric by way of melt blowing is also set forth in the patent. See col. 2, lines 54-57. A laminate of a first and second non-woven fabric is disclosed, where in the first non-woven fabric has a thickness of 0.3-2.0 mm and the second fabric has a thickness of 1-8 mm. See col. 2, lines 60-63. The non-woven fabric is shown to have a basis weight, gas permeability and average fiber diameter of 20-100 g/m², 15-300 cc/cm²/sec, and 0.5-20 μm, respectively. See col. 2, line 65 – col. 3, line 2.

The prior art of Kamei et al anticipates the applicant's instant invention as set forth above. The materials used in the Kamei et al patent and those used in the

Art Unit: 1746

Kamei et al application are the same materials within the same ranges for the particular parameters such as the fiber diameter, basis weight, air permeability and thickness requirements. Therefore the materials will inherently have those properties as set forth in the instant dependent limitations.
